

Olympus.io: The Secure AI Collaboration Engine for ISVs and MSPs

Olympus.io is a revolutionary platform designed to empower Independent Software Vendors (ISVs) and Managed Service Providers (MSPs) by enabling them to integrate secure, customizable AI collaboration tools into their offerings. With the rapid growth of the enterprise file collaboration and enterprise AI markets, Olympus.io provides a solution enabling businesses to build ChatGPT-style experiences using their customers' data in a matter of weeks. This document outlines the unique features and benefits of Olympus.io, highlighting its potential to transform how ISVs and MSPs deliver AI capabilities to their clients.

Why Now?

Two major enterprise markets are exploding—and Olympus.io puts you at their intersection.

- The enterprise file collaboration (EFSS) market is projected to reach **\$35.5 billion by 2028**, growing at a **30.4% CAGR**.
- The enterprise AI market is expected to hit **\$632 billion by 2028**, expanding at a **29% CAGR**, driven by demand for generative AI, chatbots, and document intelligence.

Explosive Growth in Enterprise Markets

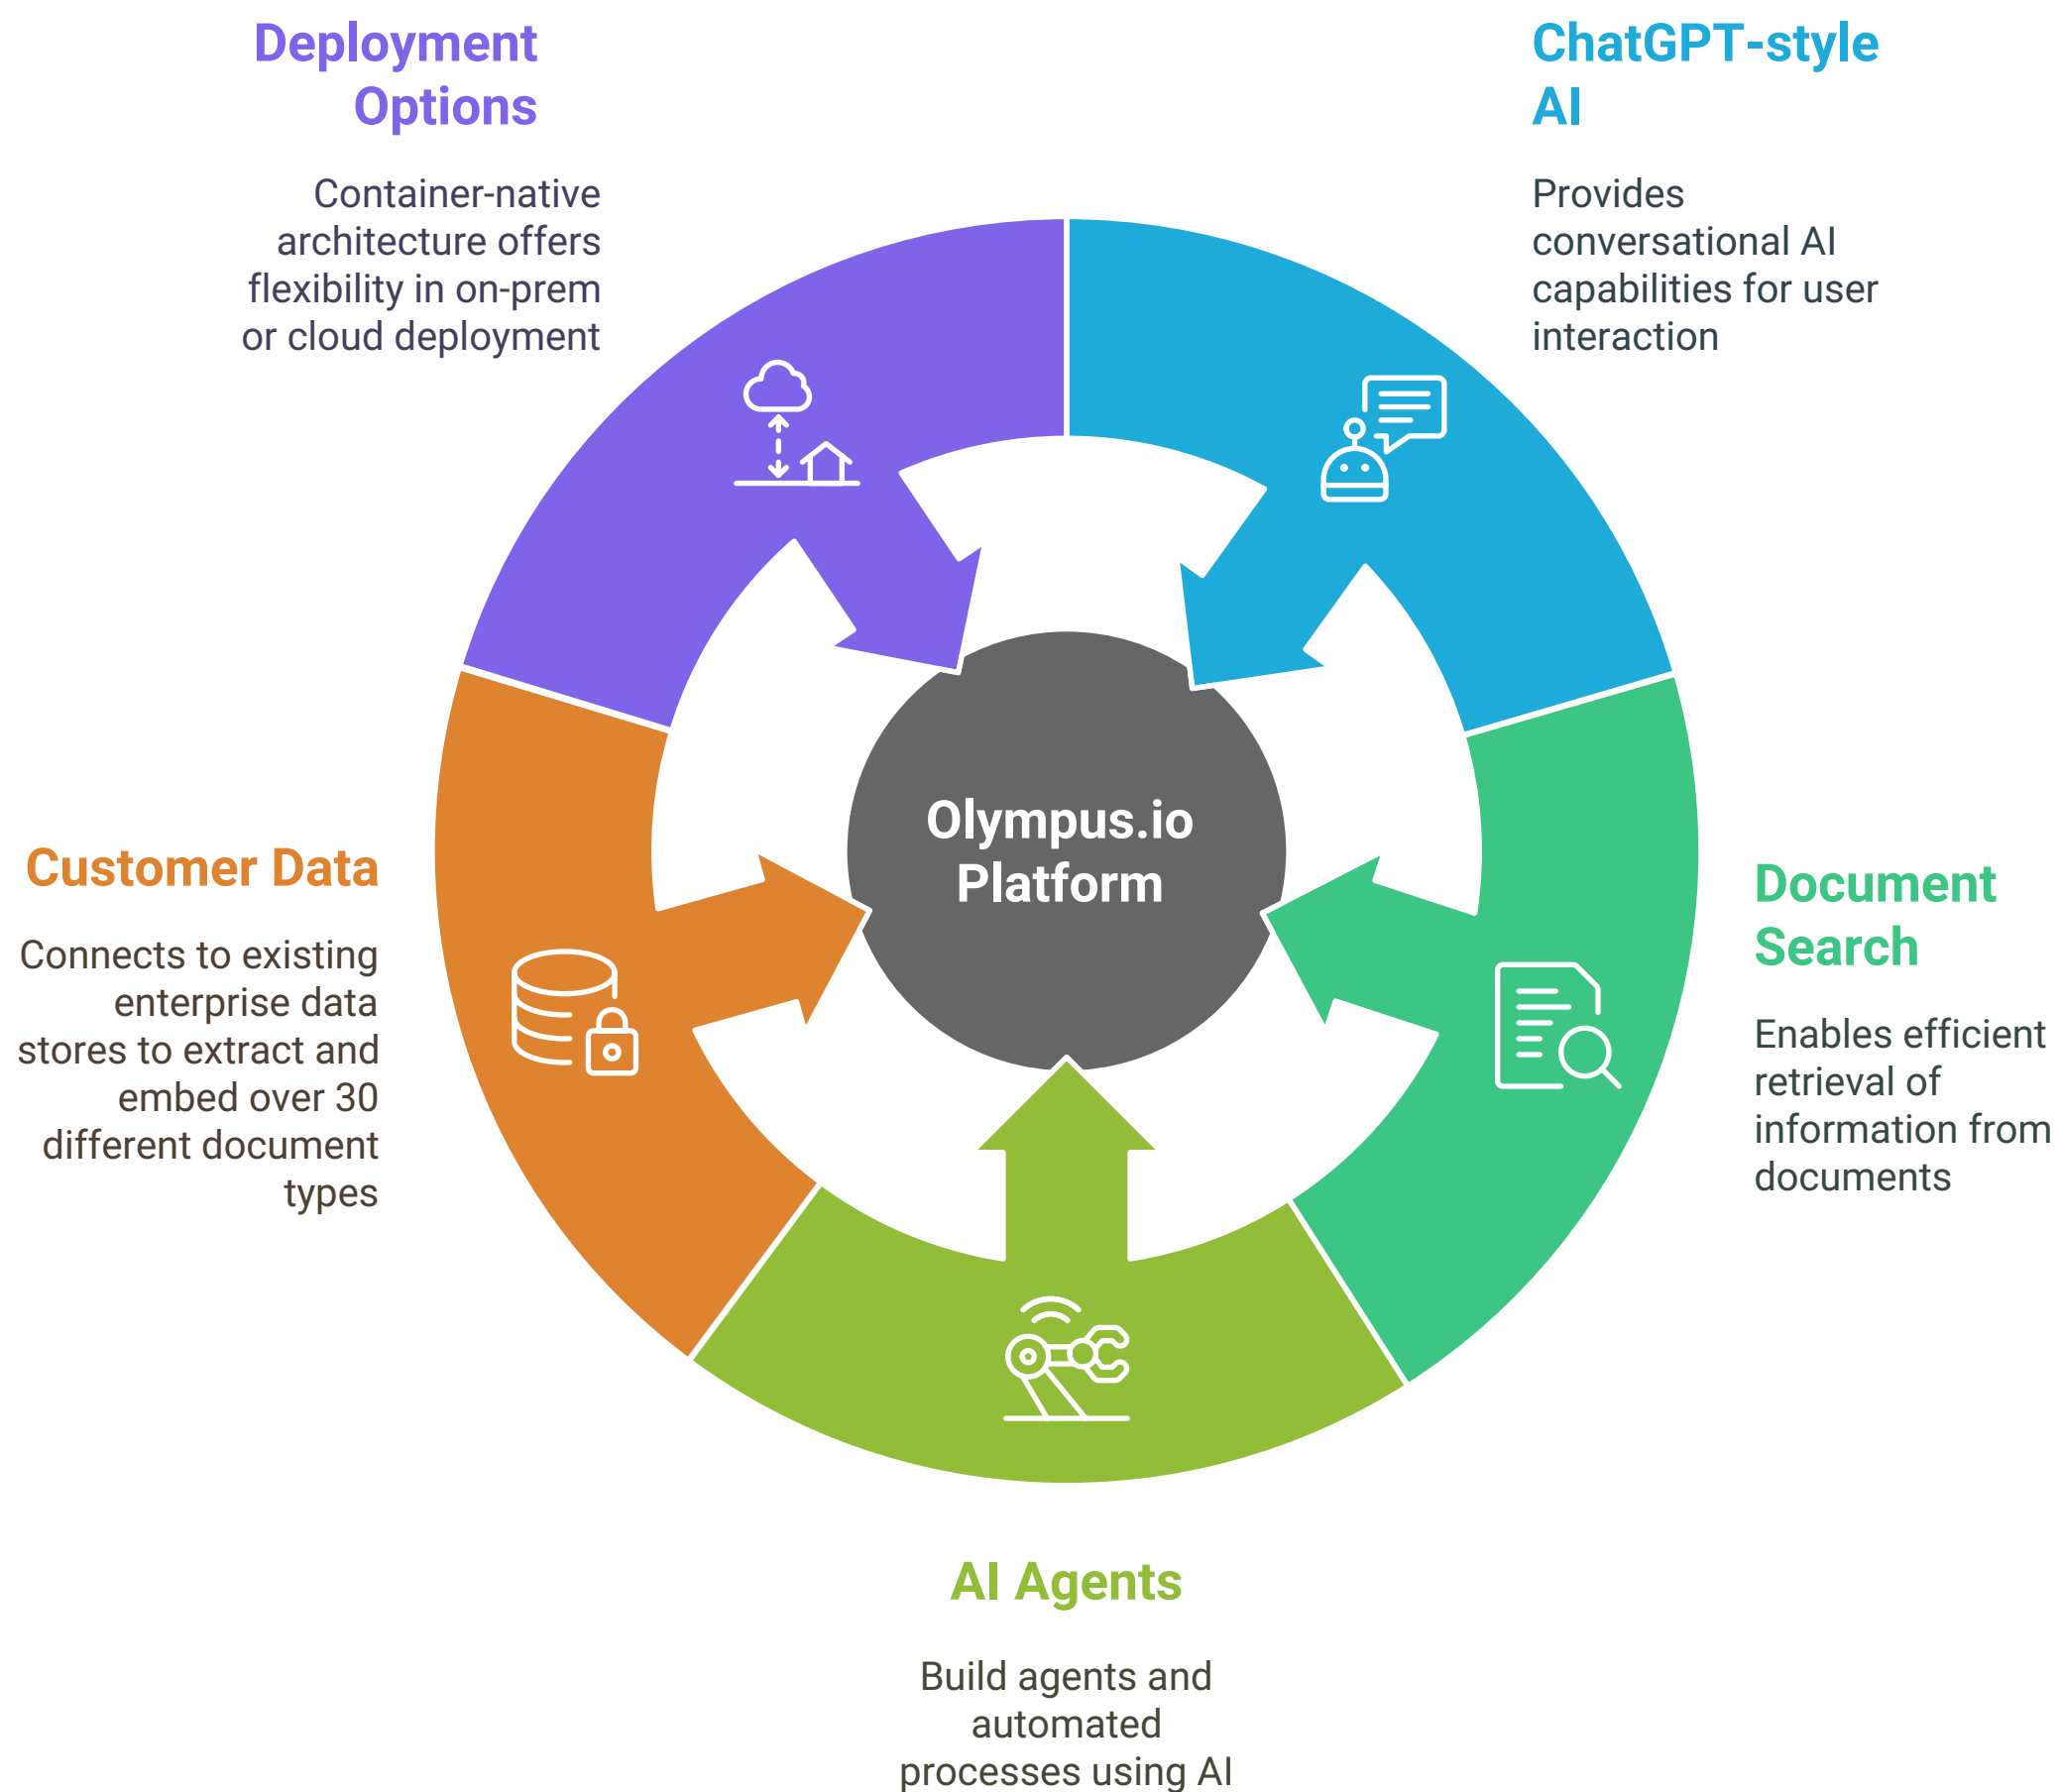

Yet most ISVs and MSPs still lack a secure, private, and customizable platform to offer generative AI collaboration to their customers.

Olympus.io Changes That

Olympus.io is a white-label, multi-tenant platform that lets you offer your own version of ChatGPT-style AI chat, document search, and AI agents—powered by your customers' data, deployed securely on-prem or in the cloud.

It's not just an API—it's an end-to-end platform for building, deploying, and reselling AI-powered collaboration tools in weeks, not months.

For ISVs: Add AI to Your Product—Fast

As an Independent Software Vendor, your customers expect AI capabilities now.

Olympus.io lets you:

- Embed ChatGPT-like AI tools into your product without building a backend from scratch.

- Deliver AI assistants that work with your customers' real data, in a compliant, private way.
- Cut development timelines by **6–12 months** with prebuilt components like vector search, model routing, pdf-extraction and file indexing.

For MSPs: Resell Private AI Under Your Brand

Your customers want AI—without handing-over their data to third parties.

Olympus.io lets you:

- Deploy fully branded AI collaboration solutions to your clients.
- Run on your infrastructure or theirs, with multi-tenant isolation and full data sovereignty.
- Leverage a proven platform with LLM Switchboard, file collaboration, and RAG pre-integrated.

Built for Privacy and Compliance

Unlike public cloud chatbots, Olympus.io is designed for regulated industries:

- Curate your LLM Models (Llama 4, Mistral, NVIDIA Nemotron, DeepSeek-R1, etc.).
- Enforce file-level access control via Active Directory.
- Enable on-prem, air-gapped deployments for highly sensitive clients.
- Audit everything—every query, file, and user action.

Powered by a Scalable Architecture

- **LLM Switchboard:** Dynamically route queries to private or public models based on data sensitivity, cost, or user group.
- **Secure RAG Engine:** Embed and search enterprise content for real-time document-grounded AI answers.
- **Enterprise File Support:** Add Dropbox-style collaboration to file servers or object storage.
- **Flexible Deployment:** On-prem, in the cloud, or as a managed service.
- **Extensible by Design:** Use the Olympus.io API to build AI agents, co-pilots, and bots into your own app.

Market Momentum You Can Monetize

You're not too late—but the timing is now. AI adoption in business is accelerating:

- **75%** of C-suite leaders say they're increasing AI investments in 2025 [McKinsey].
- AI will generate over **\$4.4 trillion** annually in economic value across industries by 2030 [McKinsey, 2023].
- **80%** of enterprise data is unstructured—making AI search, chat, and summarization the next frontier.

Olympus.io lets you turn that wave into revenue—without months or years of engineering.

Your AI Stack. Your Brand. Your Business.

With Olympus.io, you get:

- A ready-to-deploy AI platform with file sharing, chat, and LLM routing.
- Full source-code , private Github repository access and SDKs.
- Multi-tenant security and enterprise scalability.
- Flexible licensing and OEM pricing.
- Fast onboarding, knowledge transfer and dev support.

The Opportunity Is Now

As an ISV or MSP, your customers will buy AI collaboration. Will they buy it from you—or from someone else?

Olympus.io lets you deliver it now—securely, privately, and profitably.
